

New Grape Selections Available From FPS

The following grape selections released within the last 4 years have been tested for disease and planted in the FPS Foundation Vineyard. The source vines of most of these selections are too young to produce hardwood cuttings for sale in the current dormant season. To ensure that FPS customers are able to receive some propagating material of even the newest selections, customers may custom order mist-propagated plants (own-rooted green plants in 4" pots) of the selections included on this list.

MPPs are produced from young mother vines after they are ordered for delivery approximately 6-12 months later. Expected delivery dates depend on several factors, including time of year ordered, number of plants requested, number of other orders received for the same selection(s), and age and condition of source vine(s). MPPs may be requested at any time of year, but to have the best chance of receiving at least some of your plants the following summer, it's best to place your order by November 15th. Due to the limited supply of material to start MPPs, large orders can sometimes take up to two years to fill completely.

The most complete and detailed information about new FPS selections, including source information, disease elimination treatment status and relevant comments, as well as varietal information and descriptions, including synonym information, can be viewed on the National Grape Registry (NGR) Web site maintained by FPS at:
